

KNEE ARTHRITIS TREATMENT GOALS

CONTROL PAIN & DELAY PROGRESSION

Knee OA has commonly been regarded as a condition affecting the elderly. However, it can start developing quite early. Preventive care should be considered at an early stage for individuals who are at risk, as well as for patients already showing early signs of impairment.

Various methods may be used in an effort to delay OA progression, including; weight management, biomechanics interventions, injection therapies, or a combination of these.

Is the Formfit® Pro Knee OA for you?

- Medial or lateral knee pain
- Early or mild unicompartmental osteoarthritis of the knee
- Symptomatic, unicompartmental meniscus degeneration
- Your specialist can help advise you based on your condition and stage of arthritis

FOLDLOCK

Patented FoldLock™ System

- Fold Edge
- Grip Pattern
- Added comfort

COOLVENT

CoolVent™ Technology
Superior breathability

STAY BILIZER

EVA upright hinge -
integrated into sleeve

MOTION TECH

3D Knitted Sleeve Design

CERTIFIED MEDICAL
GRADE COMPRESSION

ENHANCED PROPRIOCEPTION

PROVEN JOINT UNLOADING
powered by double DFS straps

OA
OSTEOARTHRITIS

FORMFIT PROKNEE OA

DESIGNED TO MAINTAIN ACTIVITY

The PROKNEE OA uses patented technology that supports you staying active, alleviating pain and preventing painful flares following exercise.

If your knee is inflamed or painful and you'd like to understand more about fast and long-term pain relief:

➡ **Speak to your clinician about Monovisc or Cingal**

Bracing and injection therapy often work best together. The brace helps stabilise and protect your knee, while the hyaluronic acid injection supports the joint from within. Compression and off-loading can enhance the benefit of the injection and give you confidence to return to daily activity.

The injection then continues to nourish and lubricate the joint for longer-term comfort and joint health.

89% of patients with mild to moderate arthritis have significant pain reduction after 1 week with Cingal.

Hybrid Cingal & Hyaluronic Acid Matrix Monovisc

- **Cingal** combines fast acting steroid with **Monovisc**, a proven high dose, high performance hyaluronic acid.
- Studies taken from 3 separate **Cingal** level 1 human trials show:

**Significant
Pain relief
at 1 week**

**Pain relief
that lasts
beyond 6
months**

**More
effective &
safer vs
steroid alone**

**92/100
patients
respond +ve
to treatment**

- **Monovisc** as a standalone treatment is a high performing, long lasting option without steroid.
- A hyaluronic acid with a range of molecular weights, that offer **Lubrication, Cushioning, Synovial Health**
